

Amendments to the Claims:

1.(currently amended) A portable ultrasonic cleaner comprising:

- a housing having a soiled fabric area engagement face;
- an ultrasonic radiating structure carried at said engagement face for direct contact with a structure to be cleaned;
- a piezoelectric transducer in physical communication with said central ultrasonic radiating structure;
- power driver circuitry in electrical contact with said piezoelectric transducer to ultrasonically drive said piezoelectric transducer; and
- ultraviolet light output source having a light output structure proximal to said ultrasonic radiating structure.

Please add the following new claims:

2.(new) A portable ultrasonic cleaner as recited in claim 1 wherein said ultrasonic radiating structure protrudes from said housing.

3.(new) A portable ultrasonic cleaner as recited in claim 1 wherein said ultrasonic radiating structure is linear along said housing and wherein said light output proximal to said ultrasonic radiating structure and at least partially follows an extent of said ultrasonic radiating structure.

4.(new) A portable ultrasonic cleaner as recited in claim 3 wherein said ultrasonic radiating structure protrudes from said housing.

5.(new) A portable ultrasonic cleaner as recited in claim 1 wherein said ultraviolet light output source having a light output includes a pair of light outputs located on opposite sides of said ultrasonic radiating structure.

6.(new) A portable ultrasonic cleaner as recited in claim 5 wherein said ultrasonic radiating structure protrudes from said housing.
